

pcAnywhere Software

Key Features

- **NEW!** Remote management tools let you run vital utilities remotely to solve problems and modify settings.
- **NEW!** Utilities you can use remotely include Command Prompt, Task Manager, Services, and Regedit.
- **NEW!** Other remote management capabilities include viewing, starting, and stopping services; shutting down, locking, and rebooting workstations; logging off users; viewing the NT Event log; editing system files; and viewing installed programs.
- **NEW!** Now supports 13 different authentication methods, including LDAP, ADS, NDS, Novell® Bindery, NT domains, and RSA SecurID.®
- **NEW!** The pcAnywhere Command Queue lets you send a set of files and DOS commands to one or more computers.
- **NEW!** Symantec Packager™ lets you deploy custom configurations of pcAnywhere and other applications to any Windows NT, 2000, XP, or Server 2003 system.
- **NEW!** Files are transferred in the background so you can work uninterrupted.
- **NEW!** Redesigned user interface makes navigation easier than ever.
- PKI and symmetric encryption protect confidential data.
- Allows you to restrict access to specific subnets or IP addresses.
- Lets you hide your pcAnywhere-enabled systems from people browsing the network for TCP/IP hosts.
- Mandatory password protection ensures that only authorized users can access a pcAnywhere host.
- The encryption wizard provides easy access to powerful data security.
- Compatibility with cable and DSL modems permits high-speed remote connections.
